

# CHRISTY TURNER TEST FACILITIES

At Christy Turner we operate a test facility for our on-going research & development. This gives positive data for customer requirements and capacity estimations

We offer the use of this facility to test grind your materials in order to give you confidence in the performance and capacity of the machines you are buying and to help fine tune the process to give the end product you require.

Christy Turner carry out trials on behalf / with customers as upfront work prior to new order placement. A fee will be charged per trial in our test facility due to engineer involvement in set-up, testing & interpreting data. Once an order for a new mill has been placed the costs associated with the trials will be deducted from the final purchase price of the mill.

We have the following machines currently operating in our test facility:

**Lab Mill**  
**Miracle Mill 100**  
**LB7**  
**X15 Hammer Mill**  
**24x 12 Pulverizer**

Payment is required upfront in order to book a test date. Additional charges may apply where special screens, beaters or other special equipment is required.

We request that you arrange to collect all trial material within 30 days of the test completion and unless arrangements have been made for further work to be done. Any material not collected within this time will become property of Christy Turner Ltd and a disposal charge of £200 per Ton will be made.

Material safety data sheets are to be provided by the customer prior to any trials and no trial will be undertaken for any hazardous materials without prior written approval from the General Manager. Certain materials that require additional preparation or cleaning of our machinery may incur an additional charge.
